Liner Quattro AC XB RGBW

The Liner Quattro AC XB RGBW is an AC line powered, high brightness luminaire. The luminaire is controllable via DMX512 with auto-addressing for easy configuration. The system is connected using a daisy chain topology, allowing easy installation to form long run lengths. Remote Device Management (RDM) circuits are built into each luminaire that enables extensive control and monitoring of the entire lighting installation.

Product Specifications

	XB4.9	XB4.18
Light Source	4-in-1 LED clusters	
Color Range	RGBW (White CCT 4000K)	
Beam Angle	13°, 30° × 15°, 75° × 40°, 60°	
Luminous Flux[1]	1494 lm	2922 lm
Efficacy[1]	34 lm/W	
Lumen Maintenance	L70 @25°C - 80,000hrs	
Cover Lens	Tempered glass cover	
Housing	Aluminium	
Adjustment Options	±90° tilt	
Size (L × W × H)	594 × 75 × 117mm 24” × 3” × 4.6”	1188 × 75 × 117mm 48” × 3” × 4.6”
Weight	5kg / 11lbs	7.5kg / 16.5lbs
Regulatory Listing & Safety Approval	CE, cETLus	
Operating Temperature	–30°C to +50°C / –22°F to +122°F (–20°C / –4°F starting)	
Storage Temperature	–40°C to +70°C / –40°F to +158°F	
Environment	Outdoor (IP66), suitable for coastal environments	
Humidity	85%, non-condensing	

Electrical Specifications

Input Voltage	100V-277V AC 50/60Hz	
Power Consumption	46W	85W
Power Factor	≥ 0.9	

System Specifications

Power	AC line
Control	DMX512 with auto-addressing, Remote Device Management (RDM)
Power Supply	Built-in

1. Based on photometric data of Liner Quattro AC XB 30° × 15°

LED CHARACTERISTICS Because LEDs are semiconductor devices, their performances are subject to inherent variability commonly found in semiconductor industry. To improve consistency in performance across the same product, LED manufacturers “sort” LEDs into bins according to different preset parameters, such as forward driving voltage, illumination, etc. Whereas binning is a sorting function, it is not a correction process. Inherent variability in the manufacturing process results always in different binning distributions according to different production lots. Traxon uses automatically binned LEDs on its products, thereby minimizing output variations within the model range.

As with all electronic devices, LED output degrades over time – a term called lumen depreciation. This also explains why it is nearly impossible to expect photometric performances of two LED products with different service life spans to be the same. The rate of LED degrade is a complicate function of many factors such as operating efficiency, duration of continuous operation, and more significantly, environmental conditions (ambient temperature for example). If allowed working under optimal operating temperature range and with good ventilation, LED devices enjoy long service lives over conventional light sources. When using/installing LED devices, care should be taken to ensure that the devices will operate within the operating conditions specified in respective product literature.

Lumen measurement compiles with LM-79-08 standard.
Lumen maintenance is calculated based on LM-80 compliant measurement.

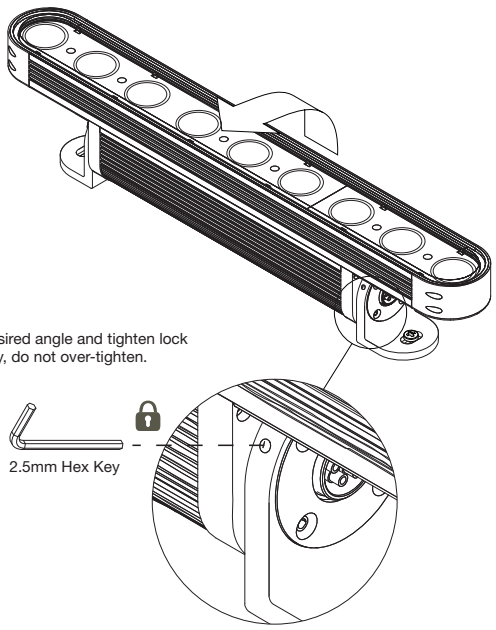
① Rotate fixture to gain access to mounting holes.
Fix screws to mounting brackets.



② Rotate fixture to desired angle and tighten lock screws with hex key, do not over-tighten.
